Worldclass Solutions (WCS) - on-device aged-care intelligence on Apple's platform.

HEADLINE: The bedside iPhone is now the smartest carer in the room.

AgedCare Monitor transforms a standard iPhone and Apple Watch into a privacy-first monitoring layer for dementia care, fall risk, and distress detection - without streaming video to the cloud. Built on Apple Vision, CoreMotion, SoundAnalysis, HealthKit, HomeKit, and CloudKit, the product ships today on the App Store (v1.0.4) with a freemium path to Care Pro and Care Team subscriptions.

THE MARKET: Global aged-care spending exceeds USD 400 billion annually and is accelerating with demographic shift. Facilities face chronic staffing shortages; families demand remote visibility. Incumbent software is chart-centric and desktop-bound - AgedCare Monitor is mobile-native, alert-first, and designed for the worker at the bedside and the daughter in another city.

THE MOAT: (1) On-device inference - lower latency, lower liability, GDPR-friendly. (2) Multi-role permission model (Admin, Nurse, Carer, Family) in one SKU. (3) Apple ecosystem integration (Watch SOS, HealthKit trends, HomeKit environment). (4) No ad SDKs or third-party trackers - trust positioning for regulated care settings.

BUSINESS MODEL: Free download drives facility pilots and family trials. Recurring revenue via `wcs.agedcare.carePro.monthly` and `wcs.agedcare.careTeam.monthly`. Expansion: facility site licences, white-label dashboards, API partnerships with EHR vendors.

ASK: Seed / strategic capital to scale go-to-market in AU, UK, and US aged-care chains, clinical advisory board, and SOC2-aligned cloud sync for enterprise care groups.

Consumer Advertisement

For families, carers, and aged-care staff who refuse to choose between privacy and protection.

TAGLINE: See the moment that matters. Not every moment.

Place an iPhone beside your loved one's bed. AgedCare Monitor quietly watches for falls and distress sounds using on-device intelligence - your private moments never upload to a server. When something happens, carers and family get clear alerts on iPhone and Apple Watch.

WHY FAMILIES LOVE IT:

- Real-time peace of mind from anywhere
- Room temperature and weather context via HomeKit
- Health trends from HealthKit (heart rate, SpO2, steps)
- One-tap account deletion - your data, your control

WHY CARE TEAMS LOVE IT:

- Resident shell for bedside monitoring; Staff shell for dashboards
- Incident timeline with optional clip retention only when you choose
- Roles for nurses, carers, administrators, and family viewers
- SOS on Apple Watch - respond faster, hands-free
